Computer Science undergraduate (B.Tech, expected June 2027) with hands-on experience building Java and Spring Boot backend systems, RESTful APIs, and Android applications. Comfortable with data structures, microservices architecture, and relational database design. Looking for a software engineering internship to contribute to real-world, production-grade systems.

EDUCATION

B.Tech in Computer Science Engineering

Raj Kumar Goel Institute of Technology and Management, Ghaziabad, UP — Expected June 2027

CGPA: 7.56 / 10 (through 6th semester)

TECHNICAL SKILLS

- **Core & Enterprise Java:** Java, Spring Boot, Microservices, Hibernate, Spring Security (OAuth2, JWT), JDBC, Servlet
- **System Design & Fundamentals:** Data Structures & Algorithms (DSA), Object-Oriented Design (OOP)
- **Programming Languages:** C (Recursion, Pointers, Structures), Java
- **Databases & Caching:** MySQL, PostgreSQL, Redis, Distributed Caching, Query Optimization, Data Persistence
- **Android Development:** Android SDK, Broadcast Receivers, FusedLocationProvider, Background Threading
- **Tools:** IntelliJ IDEA, Eclipse, VS Code, Postman, Git, GitHub, Android Studio

PROJECTS

RescuFone: Lost-Device Locator — Android app, in progress [\[GitHub\]](#) — May 2026–Present

- Building an Android app that uses **FusedLocationProviderClient** to fetch real-time device location with low latency, even when running in the background.
- Used **REQUEST_IGNORE_BATTERY_OPTIMIZATIONS** and **PARTIAL_WAKE_LOCK** so the tracking service keeps running reliably without being killed by the OS.
- Implemented a **BroadcastReceiver** that listens for an incoming "TRACK" keyword message and automatically triggers a Google Maps location response.

WorkSphere-Pro: Microservices Backend — In progress [\[GitHub\]](#) — June 2026–Present

- Designing a multi-tier microservices backend with **Spring Boot, Spring Data JPA, and Hibernate**, backed by a PostgreSQL persistence layer.
- Added a **WebSocket (STOMP)** layer for real-time, bi-directional messaging between services and clients.
- Built RESTful endpoints for user authentication, chat room allocation, and message indexing.
- Currently developing a peer-to-peer (P2P, socket-based) communication layer as a direct device-to-device failover option.

E-wallet: Secure Digital Wallet & Transaction System — [\[GitHub\]](#) April 2026

- Built a digital wallet backend in **Java and Spring Boot** with Spring Data JPA, handling fund transfers without race conditions.
- Designed ACID-compliant MySQL schemas for user authentication, session tokens, and transaction records.
- Wrote automated API tests in **Postman** covering the full request-response flow.

Real-Time Full-Stack Chat Application — [\[GitHub\]](#) April 2026

- Built a full-stack chat app with a Java/Android client and an asynchronous backend.
- Used **WebSockets (STOMP)** to replace HTTP polling, enabling real-time bi-directional messaging.
- Added local persistence and message-state tracking (sent, delivered, read) for a consistent chat experience.
